**Functionality in Emergency Situations
FCC Form 481, Line 610**

All of the company's facilities feature battery backup systems to prevent load drop events when street power is lost. Our systems are remote monitored 24/7 for such events. Upon an event being detected, a technician is dispatched to either confirm good working order of the generator services at the CO and/or Remote, or to deploy a portable generator for continued off grid operation.

In the event the company suffers a traffic overload, we receive alerts of trunk saturation and will reroute traffic where possible to alleviate such issues.

In the event of a physical failure, the main CO/Remotes are configured in multiple self-healing rings. This allows traffic to route between locations if an intermediate link between locations is lost around the remaining facilities.

In addition to supporting its voice network, the company's emergency generators and/or batteries would also be used to support its broadband network in the event of an extended power outage.

Company complies with the FCC's backup power requirements, effective October 16, 2015.
